

# CHESS BY IM JUAN RÖHL

**Chess** is one of the most impressive activities that humanity has created, it has diverse elements, of **art** (because of its close connection with the beauty and creativity of our race), of **science** (in the sense linked to the application of the method scientific and computer and internet), **sports** (practice with the same rules worldwide, with skills ranging from children to the so-called "Seniors" and have an International Federation created in Paris in 1924 and that has more than 150 member countries of the five continents) and of **game** (being an ideal space for healthy recreation).

Without having an exact date of origin (there are many theories about it), what is clear is that it comes from the East and passes to Europe through the Arab conquest, in the West its definitive rules have been defined and practically for more than 500 years are played with the same movements and objectives.

Chess allows Man to find himself, that is, to know his most intimate characteristics, to want to achieve success based on constant decision-making, where both **preparation (Theory)** and intuition and **talent (Practice)** intervene, This leads us to consider that any lover of the same, can reach a high level of satisfaction to understand their secret, which is no other, if not to capture the essence of harmonious movement and meaning, everything must lead a natural process of creation of ideas, plans and realizing them, motorizing them with all our intellectual weapons, **chess is a battle for the truth**, it is a confrontation of opinions, observation, calculation, cunning, life of wooden figures (or other material) ) that are committed to a real goal, in short, to achieve victory, give "CHECK MATE".
